## Senior Software Engineer

### About Me

I'm a senior software engineer with wide experience with full stack web application development with both legacy (LAMP + jQuery etc.) and modern stacks (Serverless API + React). I started my professional engineering carrier at Vilkas Group Oy in 2012. As a hobby however, I've been programing since I was a kid.

I love working with Django (DRF) + React when I need to get stuff done, but I also like playing around with Vue.js, Express.js, Haskell, Rust... or pretty much anything.

## Experience

### 2012 - present

#### *Senior Software Engineer, Vilkas Group Oy*

Vilkas is an e-commerce developer and hosting provider, where I started as a developer in 2012. Since then I've accumulated more responsibilities as a project manager and a mentor, but I still work mainly as a developer. Detailed responsibilities:

- Lead the technical side of new customer or partner projects that involve new features or modifications to our services
- Providing sysops and technical support for our enterprise customers with custom solutions
- Consult our customer
- Maintain and refactor our codebase
- Create new integration to our services (ERP, payment methods, logistic services, etc.)

### 2014 - 2015

#### *Software developer, RosterZoom Oy*

Worked with a small group of developers to build the core product for the company with Python (Django) + MongoDB.

### 2010 - 2011

#### *Radio technician, The Finnish Defence Forces*

## Education

### 2014 - , University of Tampere

MS in Software Engineering (Incomplete)

### 2011 - 2014, University of Tampere

BS in Computer Science

## Software Development Skills

**Python** (Django), **Javascript** (React, Node.js), **Perl** (ePages), **Git**, Java (Android), C, C++, Rust, Haskell, Prolog, PHP, **SQL** (MySQL, PostgreSQL), NoSQL (Google Cloud Datastore, **MongoDB**), Serverless architecture (Google Cloud, AWS), Sysops (**Linux**, Docker), Continuous integration (Jenkins, **Travis CI**, CircleCI)
